

the Watchdawg

The Watchdawg replaces the standard yellow parking brake knob. It installs quickly and without tools. Once installed, it stays on making it convenient to use anytime a driver leaves the cab.

stays on making it convenient to use anytime a driver leaves the cab.

Watchdawg shown on International ProStar

How it works...

- Remove the yellow knob and install the Watchdawg per the instructions.
- Pull the knob out to apply the brakes.
- Insert key and unlock. Watchdawg is now able to slide on its inner sleeve.
- Reposition the Watchdawg against the dash and turn key to lock. Being locked against the dash prevents brake release because you can't push it in.
- Return to operating mode by unlocking, pulling the knob to its outer location, and re-locking. The brake air valve will now operate normally.

Where it works...

Much of the competition is distanced by the versatility of the Watchdawg. The big rigs were the initial

target for the product, but it's unique design takes it far beyond to many other trucks.

Can be used for a standard rig and trailer - and more!

- Protects your truck and your cargo by inhibiting truck movement.
- Promotes safety by preventing accidental brake release. Great for vehicles left idling when working.
- Works for essentially all trucks with a screw-on knob. Optional model available for roll-pin knobs.
- Multiple units may be keyed alike for fleets.
- Customize the front decal for your fleet or dealership.

Why it works...

The Watchdawg is a proven, quality design, produced with quality materials and processes.

Precision machined aluminum body with bright anodize finish.

Hardened steel or stainless steel sleeve, latch, and lock parts.

Attention to detail throughout the entire production process.

Utilizes reliable and highly secure detained disc lock technology.

Installs in minutes! No tools required. No dash modifications.

Activates in seconds!

Always ready! Stays on the dash once installed.

Convenient, effective, affordable, & cool!

Neffco Technologies...

began in 2003 with the Watchdawg parking brake lock. The interest and focus on safety and security products for the transportation industry continue today. The Watchdawg is complimented by the LUGDAWG truck wheel lock and the JACKDAWG landing gear lock. These represent three unparalleled products for the heavy duty truck industry. Innovation will continue as these products are joined by more simple yet effective products for the purpose of safety, truck protection, and cargo protection.

The Watchdawg is a theft deterrent device. No guarantees against theft can be made, but -

Results say they work!
